HAROLD VAN B. MAGONIGLE	" 1894	LOUIS W. PULSIFER	" 1899
WILL S. ALDRICH	" 1895		

HANDSOMELY BOUND, CLOTH, SIZE 12 X 16 INCHES. PRICE \$16.00 DELIVERED  
EDITION LIMITED TO 100 COPIES

ROGERS & MANSON, Publishers (for the Boston Society of Architects), 85 Water Street, Boston, Mass.

## School Architecture BY EDMUND M. WHEELWRIGHT

A STANDARD Work on Schoolhouse Designing and Planning, in which every essential detail of schoolhouse construction is considered.

Contains over 250 illustrations of the best types of modern schoolhouses.

Primary, Grammar, High, Normal, Manual Training and Mechanic Arts Schoolhouses treated in detail; also Heating, Ventilation and Sanitation, with a chapter on Specifications.

Cloth Bound 350 pages Size 10 1-2 x 7 1-2  
Price Delivered \$5.00

ROGERS & MANSON, Publishers, 85 Water Street, Boston, Massachusetts

## The Old Brick Architecture of Holland and Belgium

“**D**ID you ever notice a little touch of art which shows itself in the way they lay their brick bond as differing from the English? Both use most generally the so-called English bond,—continuous rows, first of stretchers, then of headers. The English lay these rows all alike, but the Dutch break joint with the stretcher rows, thus keeping the same structural strength, but varying the lines of the vertical joints and giving regular diagonal lines which are very pleasing. It adds just that touch of art which we find all through Dutch work when compared with English of a similar period. Where Tudor work is coarse (picturesque and strong, it is true), the Dutch is refined and executed with the skill of an artist, and even where the Dutch run into vagaries, they are such as artists use, and one can well pardon a little frivolity in art to a people who have had so much stern reality in their daily lives.

“Then one is struck by the fact that they never try to do with brick what it is unsuited for—they never try to conceal joints and make their walls look smooth and unbroken, like a surface of cement, and they never attempt any ornament which is not a legitimate constructive use of brick; but they make the most of every opportunity which the material affords to a skilled workman.”

# Perspective Drawing *by Correspondence.*

Text-book written especially for home study by W. H. LAWRENCE, Associate Professor  
Department of Architecture, Massachusetts Institute of Technology.

A thorough and comprehensive course, covering in a clear and concise manner the problems arising in office practice.

Reproduced Plate from Text-Book.

... Courses in ...

**MECHANICAL DRAWING; HEATING, VENTILATION and PLUMBING,  
ARCHITECTURE and CIVIL ENGINEERING.**

Every progressive architect and builder should have a working knowledge of steam and electricity as related to heating, light and power.

Such a knowledge can be gained through our courses in

**ELECTRICAL and STEAM ENGINEERING.**

*In addition to their regular instruction papers, students in full engineering courses are furnished a Technical Reference Library (in ten volumes) as a help in their studies. This Library contains practical information relating to steam, electrical, mechanical and sanitary engineering, and is of great value to architects.*

**AMERICAN SCHOOL OF CORRESPONDENCE,**

**Armour Institute of Technology,**

**CHICAGO, ILLINOIS.**

Conservatory Chambers, Dormitories for the New England Conservatory of Music, for which Prof. Norton's tests were made. E. T. Barker, Architect, Boston.

## A Scientific and Exhaustive Test for Sound-proofing, resulting in the Recommendation and Adoption of Cabot's Deafening Quilt, and the construction of an absolutely Sound-proof Building for Musical Students.

Almost every room in these buildings is a studio of vocal or instrumental music, and would be unfit for the purpose unless each room were entirely isolated from the sounds of the others. To solve this difficult problem the Directors instructed Prof. C. L. Norton, of the Massachusetts Institute of Technology, to make a series of elaborate and exhaustive tests to ascertain the best method of construction. An ordinary metal lath and plaster partition only 3" thick, but lined with Cabot's Deafening Quilt, proved far superior to all others, although all the others were much thicker, heavier and more expensive. Prof. Norton's report (see "Insurance Engineering" for August, 1902) says:

"The efficiency of the Cabot Quilt as a material for rendering the partition 'sound-proof' is so clearly demonstrated in these tests that I recommend it for use in the partitions."

Quilt was used in both floors and partitions, and the finished building shows it to be a complete success.

Quilt is the only deadener that absorbs and dissipates the sound waves. Non-decaying, unflammable and sanitary — a scientific sound-proofer, indispensable for apartments, schoolhouses, hotels and hospitals.

Samples and full particulars on application.
